Schools	276				62				145				483			

Note: This table reports grade-specific intent-to-treat effects of the Pioneer Schools Program. Grade is defined at baseline. Outcomes are standardized raw total test scores within exam wave relative to the control group for the corresponding cohort. The overall outcome stacks the Arabic, French, and Math subject samples. Standard errors clustered at the matched-pair level are shown in parentheses. Benjamini–Yekutieli adjusted p-values are shown in brackets; adjustment is performed within each exposure-by-cohort family across grades and outcomes. The Students row gives the unique number of students in each grade-specific regression. Pooled estimates give each cohort equal total weight within the grade-by-outcome sample. Stars indicate adjusted significance: * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
